

For a truly professional car wash experience.
Conveyor tunnel systems with linear technology
from WashTec.

"Who offers the solutions
my clients expect from me?"

WashTec has the answers for your business.

The car wash business is very demanding. Nobody knows this better than WashTec. We have revolutionised the car wash market – and have been driving it forward for more than 50 years. With highly efficient washing technology, optimally calibrated chemicals and comprehensive services for you as an operator.

Our concept reads as follows:

In everything we do, we are not only focussed on perfect results. But above all else, we focus on people. Every car wash is expected to get cars clean. But what matters to us is How:

- » **We recognise needs.**
Because we listen very carefully to the wishes of your customers – as well as to your requirements as an operator.
- » **We meet expectations – and exceed them.**
Our solutions are consistently geared to your wishes and expectations – and even exceed them.
- » **We support your business.**
With a car wash experience and results that will delight your customers – and turn them into your loyal regular customers.
- » **We boost your profitability.**
With robust, low-maintenance, durable technology and highly concentrated washing chemicals – for maximum yield with minimal effort.

SoftLine² – advantages for you and your customers.

- Maximum flexibility in the design of your car wash to suit your site, available space and washing requirements
- Utmost washing quality and efficiency thanks to linear technology
- Longer application times and perfect intervals ensure cleaner vehicles
- Sets standards and differs significantly from other conveyor tunnel systems
- Energy-efficient solutions save CO₂

"How do I make my car wash business even more profitable?"

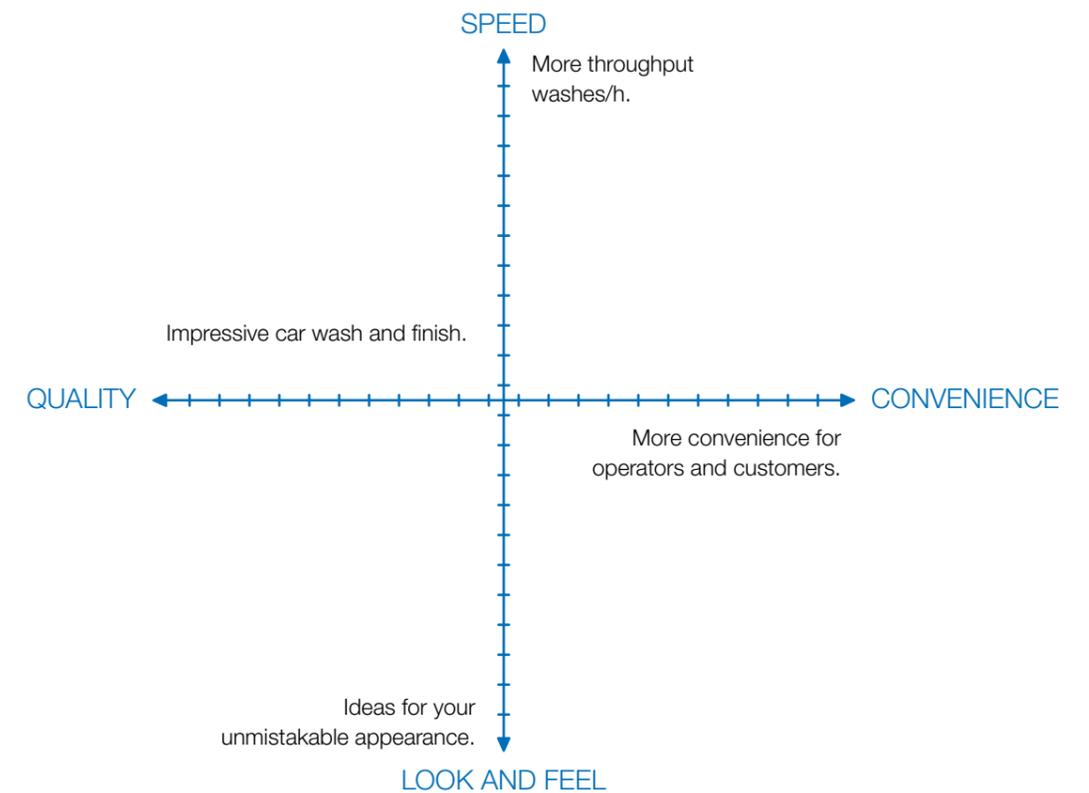

4DIMENSIONS for your successful car wash business.

Is there really a car wash out there that can provide a thorough wash and optimum drying at high throughput? Which is optimally tuned to the respective site conditions and washing potential and can be adapted to my business model?

The SoftLine² conveyor tunnel systems combine all these dimensions into a car wash experience that impresses your customers. And you as an operator equally so, since it turns vehicle washing into a lucrative business.

Such a conveyor tunnel system does exist. SoftLine². Like no other system, the SoftLine² can be configured to meet the high demands of your customers in terms of wash quality, throughput, ease of use and design. Four parameters that we at WashTec refer to as the **4DIMENSIONS** of modern vehicle washing.

Discover the new dimensions in vehicle washing with the 4DIMENSIONS. And use SoftLine², which is customisable to your business model, to guarantee maximum customer satisfaction – and for your successful car wash business.

4DIMENSIONS for every need.

The 4DIMENSIONS deliver customised solutions for every need. As an operator, you yourself decide which parameters are most important for you. And we guarantee you a solution that is optimally geared to your needs and the wishes of your customers.

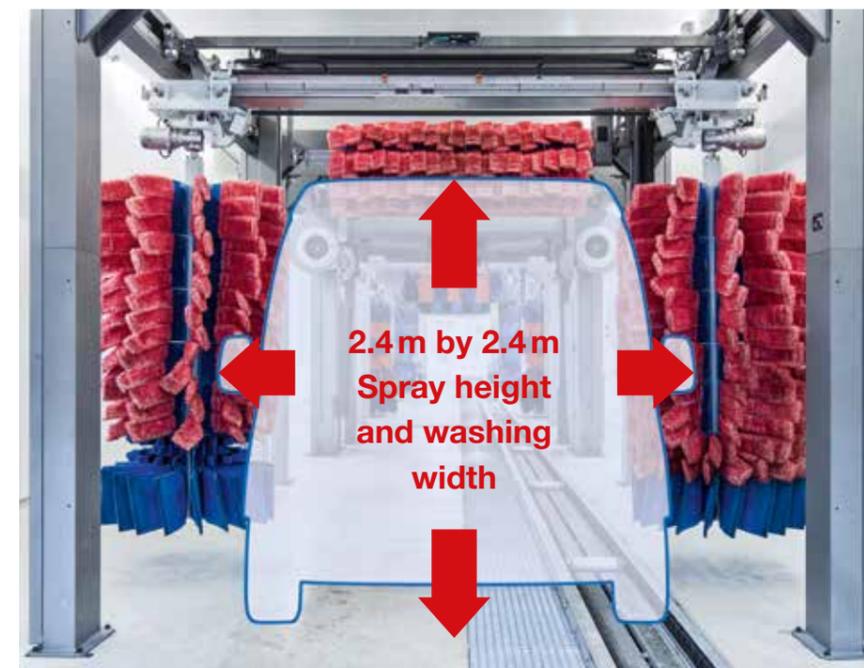

The latest technology: Modular and efficient thanks to **linear technology**.

SoftLine² conveyor tunnel systems.

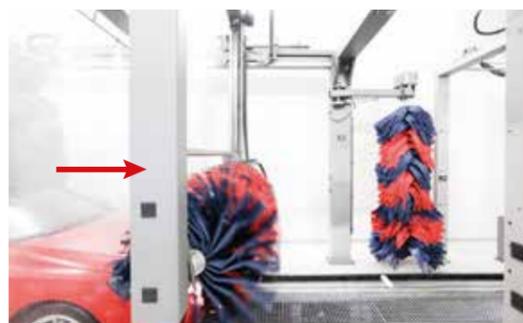

- Optimum adaptation to customer needs and site conditions thanks to the modular SoftLine² Vario concept
- With a spray height and width of 2.40 m, you and your car wash business are well prepared for the future
- With innovative linear technology for maximum efficiency and best washing results

Efficient and profitable:
Linear technology improves wash quality where it is needed.

Our proven solution: Linear travel for intensive wash with prolonged contact duration and perfect results.

- Gentle detection of the front with SmartBrush Control
- Prolonged front washing thanks to linear-travelling units

- Streak-free change of direction on the roof with linear technology
- Consistent feed-in angle depth across the entire vehicle contour

- Prolonged rear washing thanks to linear-travel units

- Optimum wash quality in areas that get very dirty such as the front and rear
- Efficiency due to short conveyor belt length and cost-efficient operation
- Less effort in the pre-wash
- More washing business thanks to efficient linear technology – higher throughput with the same space requirement and consistently high washing quality

Linear technology:
 Used in all wash processes.

Linear-travel and contour-tracking high pressure

Linear-travel and contour-tracking roof brush

Linear-travel and contour-tracking side brushes

Linear-travel and contour-tracking roof dryer

All videos about linear technology at www.washtec-uk.com

Efficient and smart:
Always close to the vehicle contour.

'Smart Brush Control' (SBC) by WashTec:

Our smart brush control system guarantees precise in-feed and constant brush contact pressure over the entire vehicle. This continuous performance monitoring ensures that we always achieve high quality washing, polishing and drying that is gentle on the paintwork.

- Consistent and paintwork-friendly washing, polishing and drying quality
- Continuous performance monitoring of the brush rotation
- Precision brush in-feed to the vehicle-specific contour
- Consistent contact pressure over the entire vehicle and all vehicle types
- With side and roof brushes

Easy to maintain,
reliable spare parts logistics.

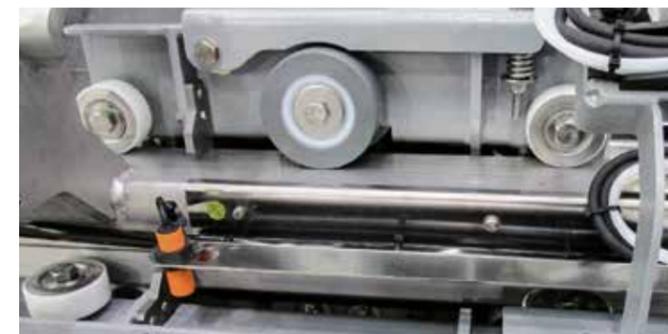

Same linear drive for high-pressure, brush and dryer station.

- Compact linear guidance integrated into the frame
- Additional support via two track rollers
- Robust drive via proven friction wheel technology
- Exact positioning by proximity switches and special profiling of the slide

Low-maintenance side roller carriage.

- Accessible design of the carriages simplifies maintenance
- The carriage rollers can be replaced individually and quickly with ease
- Optionally available with trim

Low-maintenance friction wheel technology.

- Linear and transverse travel systems are equipped with the same friction wheel drive
- Accessible design of the carriages simplifies maintenance
- No lubrication necessary
- All moving components made of stainless steel

Your advantages:

Robust and proven friction wheel technology.

Long service life and easy maintenance without lubrication

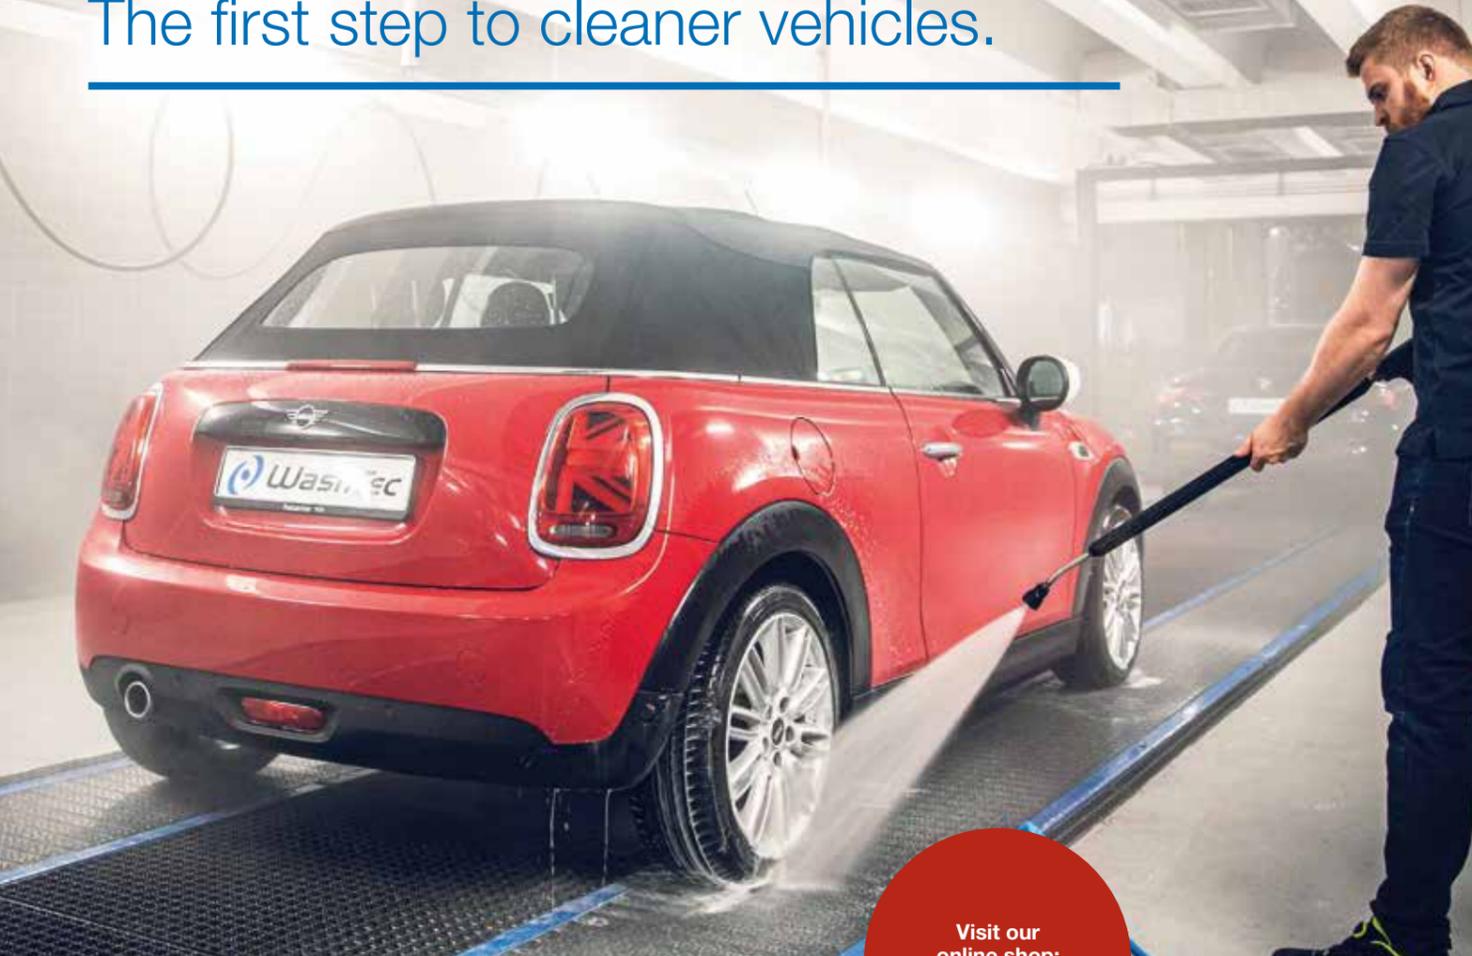

Synchronous adaptation of all units to the belt speed.

High washing quality even at high throughput

Reliable spare parts logistics.

High level of common parts across all units

Manual pre-wash area: The first step to cleaner vehicles.

Visit our
online shop:
uk.carwash-shop.com

Clean and ergonomic in the pre-wash area: The pre-wash tank.

- High-quality stainless steel tank including hand brushes
- Basket with dividers for hand brushes
- Drain tap for easy disposal of dirty water

Effectively cuts through dirt: Our robust high-pressure pre-wash module.

- The inviting pre-wash station attracts customers
- Targeted pre-cleaning completes the machine wash
- All the components are designed for heavy-duty use in continuous operation: high-pressure pump module, dual ceiling gyro from stainless steel, spray lances for high-pressure pre-wash and chemicals

Your advantages:

Optimum washing result, even happier customers.

By cutting through stubborn dirt and road grime especially in critical areas

More throughput.

Thanks to easy handling with ceiling gyro and durable high-pressure units

Operator terminal: Simple and fast control over the car wash.

Automated washing: Step by step to the perfect wash result.

CP5 Terminal Touch: Intuitive use via graphic user interface.

- The touchscreen terminal is intuitive and easy to use thanks to the graphic user navigation
- Car wash operation and configuration of the system parameters (e.g. prices, opening times, etc.) are both performed via a greatly simplified user interface
- Event monitoring and wash programme counter integrated in the control panel
- Activation via transponder cards or code input
- The individual system units can be separately controlled for adjustment via the menu

CP2 membrane keypad.

- Entry of the wash programmes and manual system control via heavy-duty membrane keypad
- Status and fault messages are displayed on a 4-line display
- For cashless payments, the terminal can be equipped with an optional transponder card reader

Your advantages:

Optimum adaptation to the operator.

Thanks to clearly laid out controls

More throughput.

Thanks to fast and intuitive operation

Rapid restart.

Thanks to fast and precise event diagnosis

Entrance gantry:

The business card of a car wash.

Your advantages with WashTec design gantries:

Optimally customised to your site.

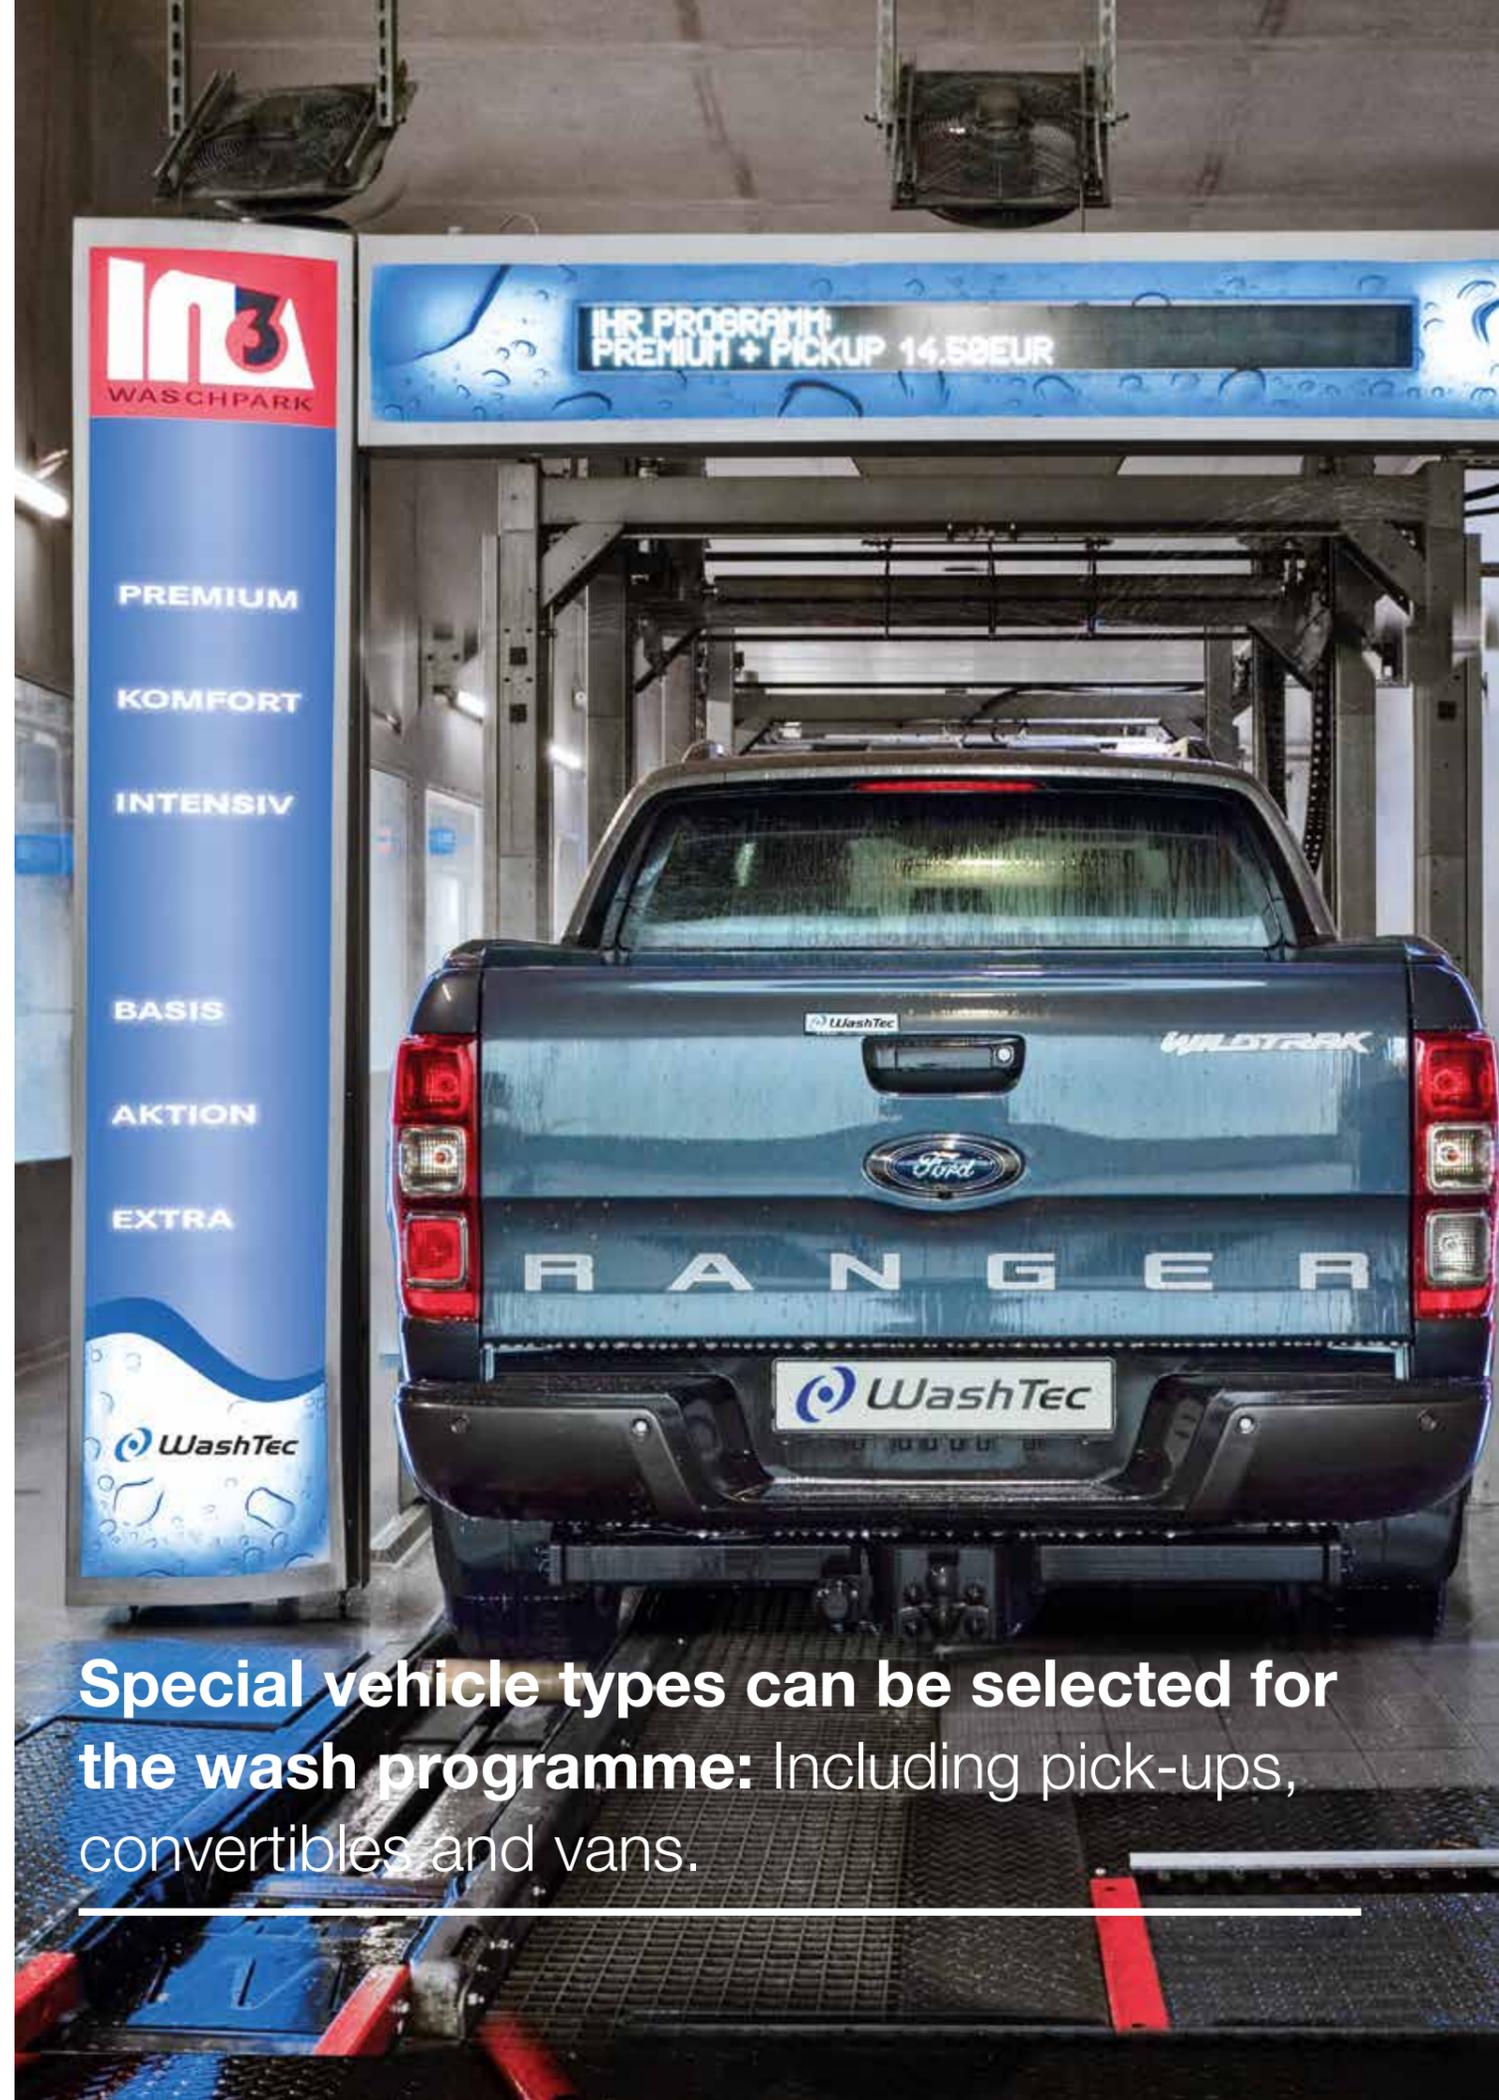

Wide range of design options

Less space required, shorter conveyor belt length.

Numerous washing functions (FoamSensation, vehicle measurement, sprinkling, foam application, rim sprayer) can be integrated

Unique and distinctive appearance.

SmartDesign: customisable banners with striking LED backlighting

Special vehicle types can be selected for the wash programme: Including pick-ups, convertibles and vans.

FoamSensation: The wow factor in the conveyor tunnel system.

Your advantages with foam sensation:

Superb washing experience in the premium programme.

By completely covering the vehicle with a continuous foam curtain

Attractive show effect: Customisable.

By means of LED backlighting with alternating colours

Easy retrofitting.

Installed as a separate unit or integrated simply at the entrance gantry

Simple and space-saving integration into the conveyor tunnel system.

Activation in a few seconds, even after a long downtime

More information on FoamSensation at
www.washtec-uk.com

LightShow & Effect lighting: For a superb washing experience

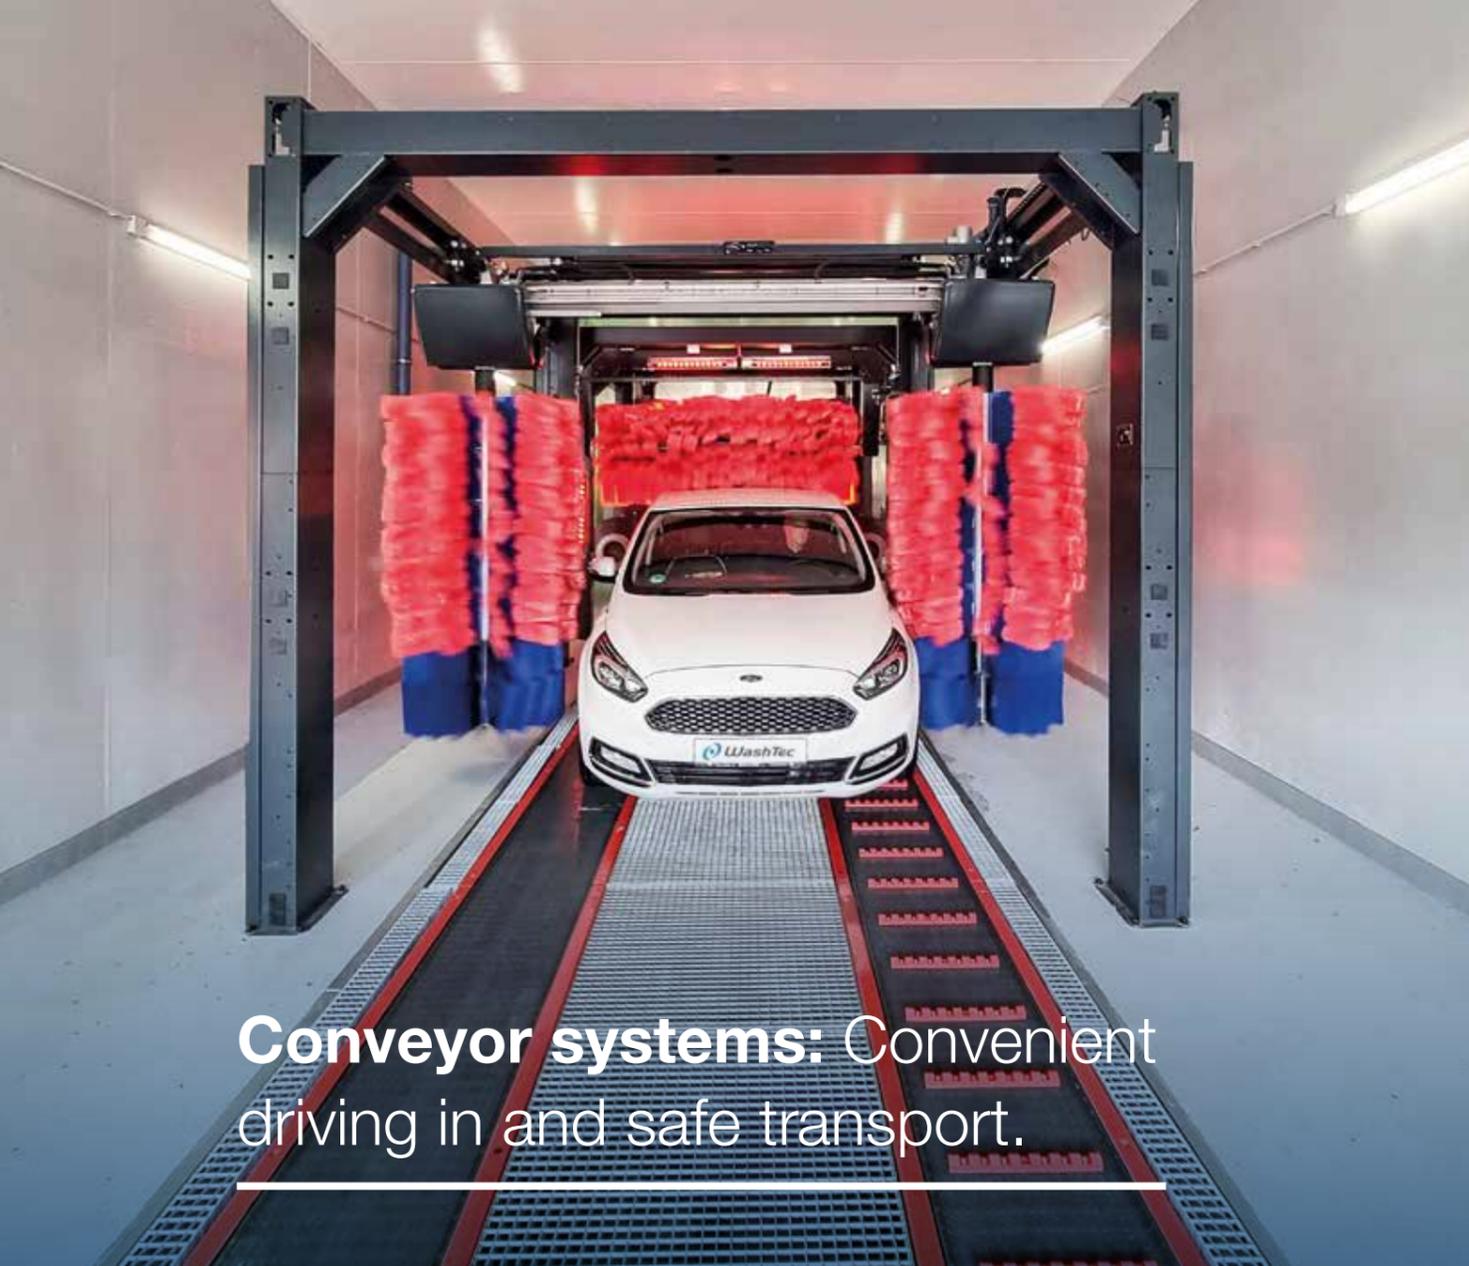

Your advantages with LightShow:

Superb washing experience and higher sales.

Attractive LED lighting makes it easy to see from inside the vehicle

High-quality & energy-saving LED lights.

Designed for the heavy-duty operation in the conveyor tunnel system

Conveyor systems: Convenient driving in and safe transport.

Double track plastic conveyor.

- Maximum protection of the tyres being made from plastic
- Floor-level installation for maximum convenience
- Robust plastic chain incl. stainless steel sliding plates
- Track width 500 mm each suitable for all tyre types
- Two drive motors for maximum operational reliability

Single track plastic conveyor.

- Maximum protection of the tyres being made from plastic
- Robust plastic chain incl. stainless steel sliding plates
- Suitable for tyre widths up to 375 mm
- Low above-ground height of just 60 mm prevents conventional wheel rims from touching the belt

Steel drag chain.

- Smooth plastic sidewalls with rounded edges guarantee tyre protection
- Above-ground height of 76 mm reliably prevents the wheel from slipping off the side of the track
- Suitable for tyre widths up to 330 mm
- Belt speed infinitely adjustable via frequency converter
- Low-maintenance drag rollers also allow the tyres to rotate in the conveyor belt for more intensive cleaning

Drive-in aids.

- The roller-mounted displacement plate assists inexperienced drivers when entering the car wash and positions their vehicles safely onto the conveyor track
- The plastic rollers ensure gentle contact with the tyres. The rollers are available in various colours
- To avoid risks of stumbling, the displacement plate only moves after contact with the vehicle

Your advantages:

Optimum adaptation to customer needs and site.

Conveyor systems available as a drag chain or plate conveyor

Gentle and safe guiding of the tyres.

Plastic guide rails on both sides

No colliding with wishbones in the vehicle.

Suitable for all standard vehicles

High throughput at peak times.

Infinitely variable belt speed thanks to frequency inverter

Coloured GRP gratings for a colour-coordinated overall design.

- In combination with the drag chain
- Available in four colours
- Impressive due to their low weight

Effective high-pressure technology: Powerful pre-cleaning close up to the vehicle contour.

Efficient high pressure on horizontal as well as front and rear areas of the vehicle.

- Effective high pressure close to the vehicle contour
- Maximum performance, especially in the front and rear area with linear-travel high-pressure station
- Pressure stages 16 to max. 70 bar, depending on the high-pressure pump used

Contour-tracking

Contour-tracking and linear travel

High pressure with spot spray nozzles – BPS.

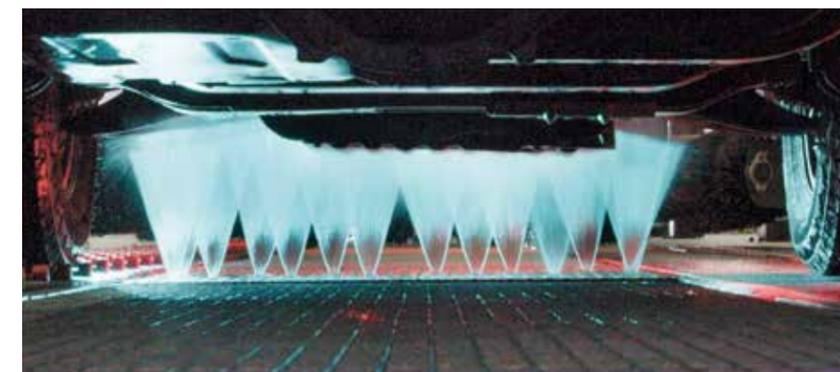

- BPS spot spray nozzles oscillating up and down ensure effective coverage of the sills, rims, sides and roof area of the vehicle
- An additional lateral swinging motion of the nozzles ensures effective cleaning of the vehicle front and rear

BPS for front, bonnet, roof and rear

BPS for wheels, sills and sides

Underbody wash with high pressure.

- The underbody washer effectively removes salt residues and dirt from the chassis
- Flush-mounted water jets clean the underbody and inclined nozzles facing outwards additionally clean the wheel arches

Your advantages:

Optimum adaptation to customer needs and site.

Various high-pressure systems available for every requirement

Less space required, shorter conveyor belt length.

Thanks to its compact design and effective contour tracking along the vehicle

Wheel and sill wash: Cleanliness for critical areas.

Intensive chemical application on wheels.

Professional rim sprayer.

- Chemical application with 4 rotating spray nozzles
- Fed by HydroMinder with membrane pump for up to 27 l/min spraying power

Rims power foamer.

- Foamed chemical application on rim
- Dosing via dosing pump
- Optionally with LED lighting

6TN: High-pressure wheel and sill washer.

- 6 vertically arranged, rotating – Turbo-Nozzles – spot spray nozzles per side
- Pressure levels max. 70 bar
- Stainless steel cover with floor attachment

9TN: High-pressure wheel and sill washer, HighTower

- 9 vertically arranged, rotating – Turbo-Nozzles – spot spray nozzles per side
- Pressure levels max. 70 bar
- Unit can be rotated in/against the direction of travel to a limited extent
- Stainless steel cover with floor attachment

Longitudinal wheel and sill washer.

- Cleaning of wheels and sills using a single unit
- 100% wheel coverage even with large rims by 2.5 m brush system
- Space-saving integration under the roof rollers

Linear-travel wheel washer.

- Intensive rim wash by rotating circular brush with over 1 m linear travel
- Automatic adjustment to belt speed
- Space-saving integration under the roof rollers
- Optional change of rotational direction

Your advantages:

Optimum adaptation to customer needs and site.

Various wheel/sill washers available for different requirements

High washing quality, especially on the rims.

Thanks to optimised interaction of chemicals, high pressure and brush wash

Brush station: For the best polishing, washing and drying results.

SoftLine² Vario brush station: Modular and flexible for maximum throughput.

- Thanks to the modular Vario concept, the roof and side brushes can be flexibly combined to cater to the requirements of the particular site or customer needs
- Depending on the required conveyor belt speeds, electronically controlled, linear movement paths can be selected for the side brushes from 450 to 1,250 mm
- The frame construction is hot-dip galvanized and powder-coated or available in stainless steel
- The frame is available in a choice of 18 standard colours; other colours are possible subject to an additional charge

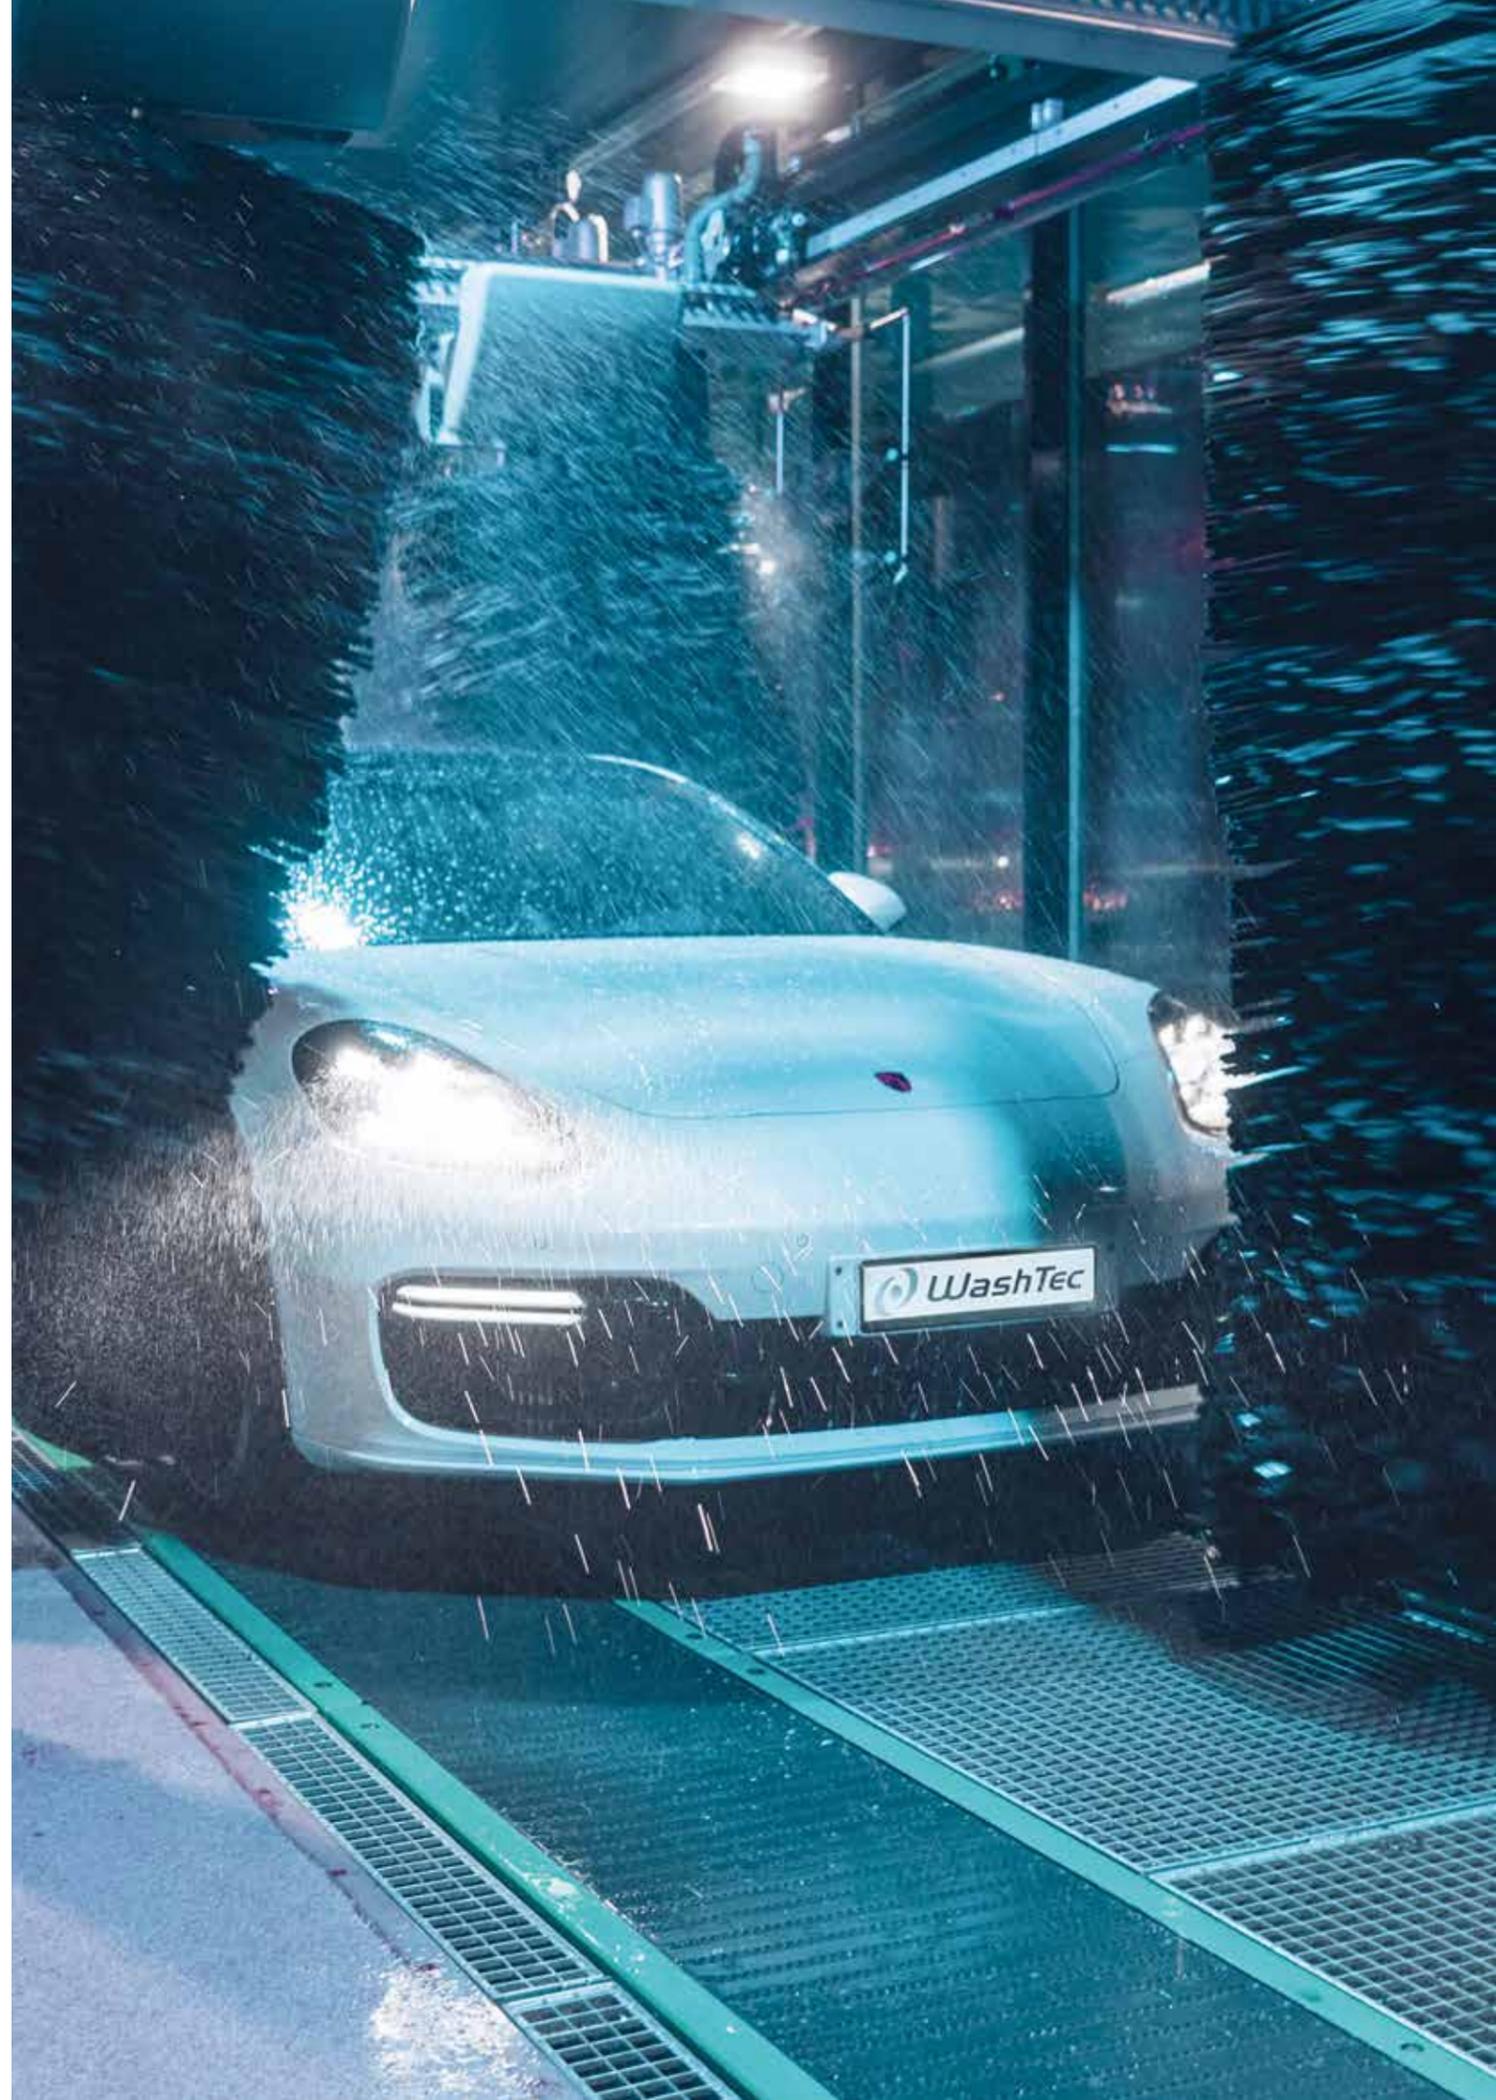

Your advantages:

High quality and gentle vehicle wash even at high throughput.

Thanks to systematic implementation of linear technology in the brush station

Versatile and optimum adaptation to customer needs and site.

Thanks to modular design according to the SoftLine² Vario concept

Washing brushes: The right material for gentle car washing.

SofTecs impresses with its durability.

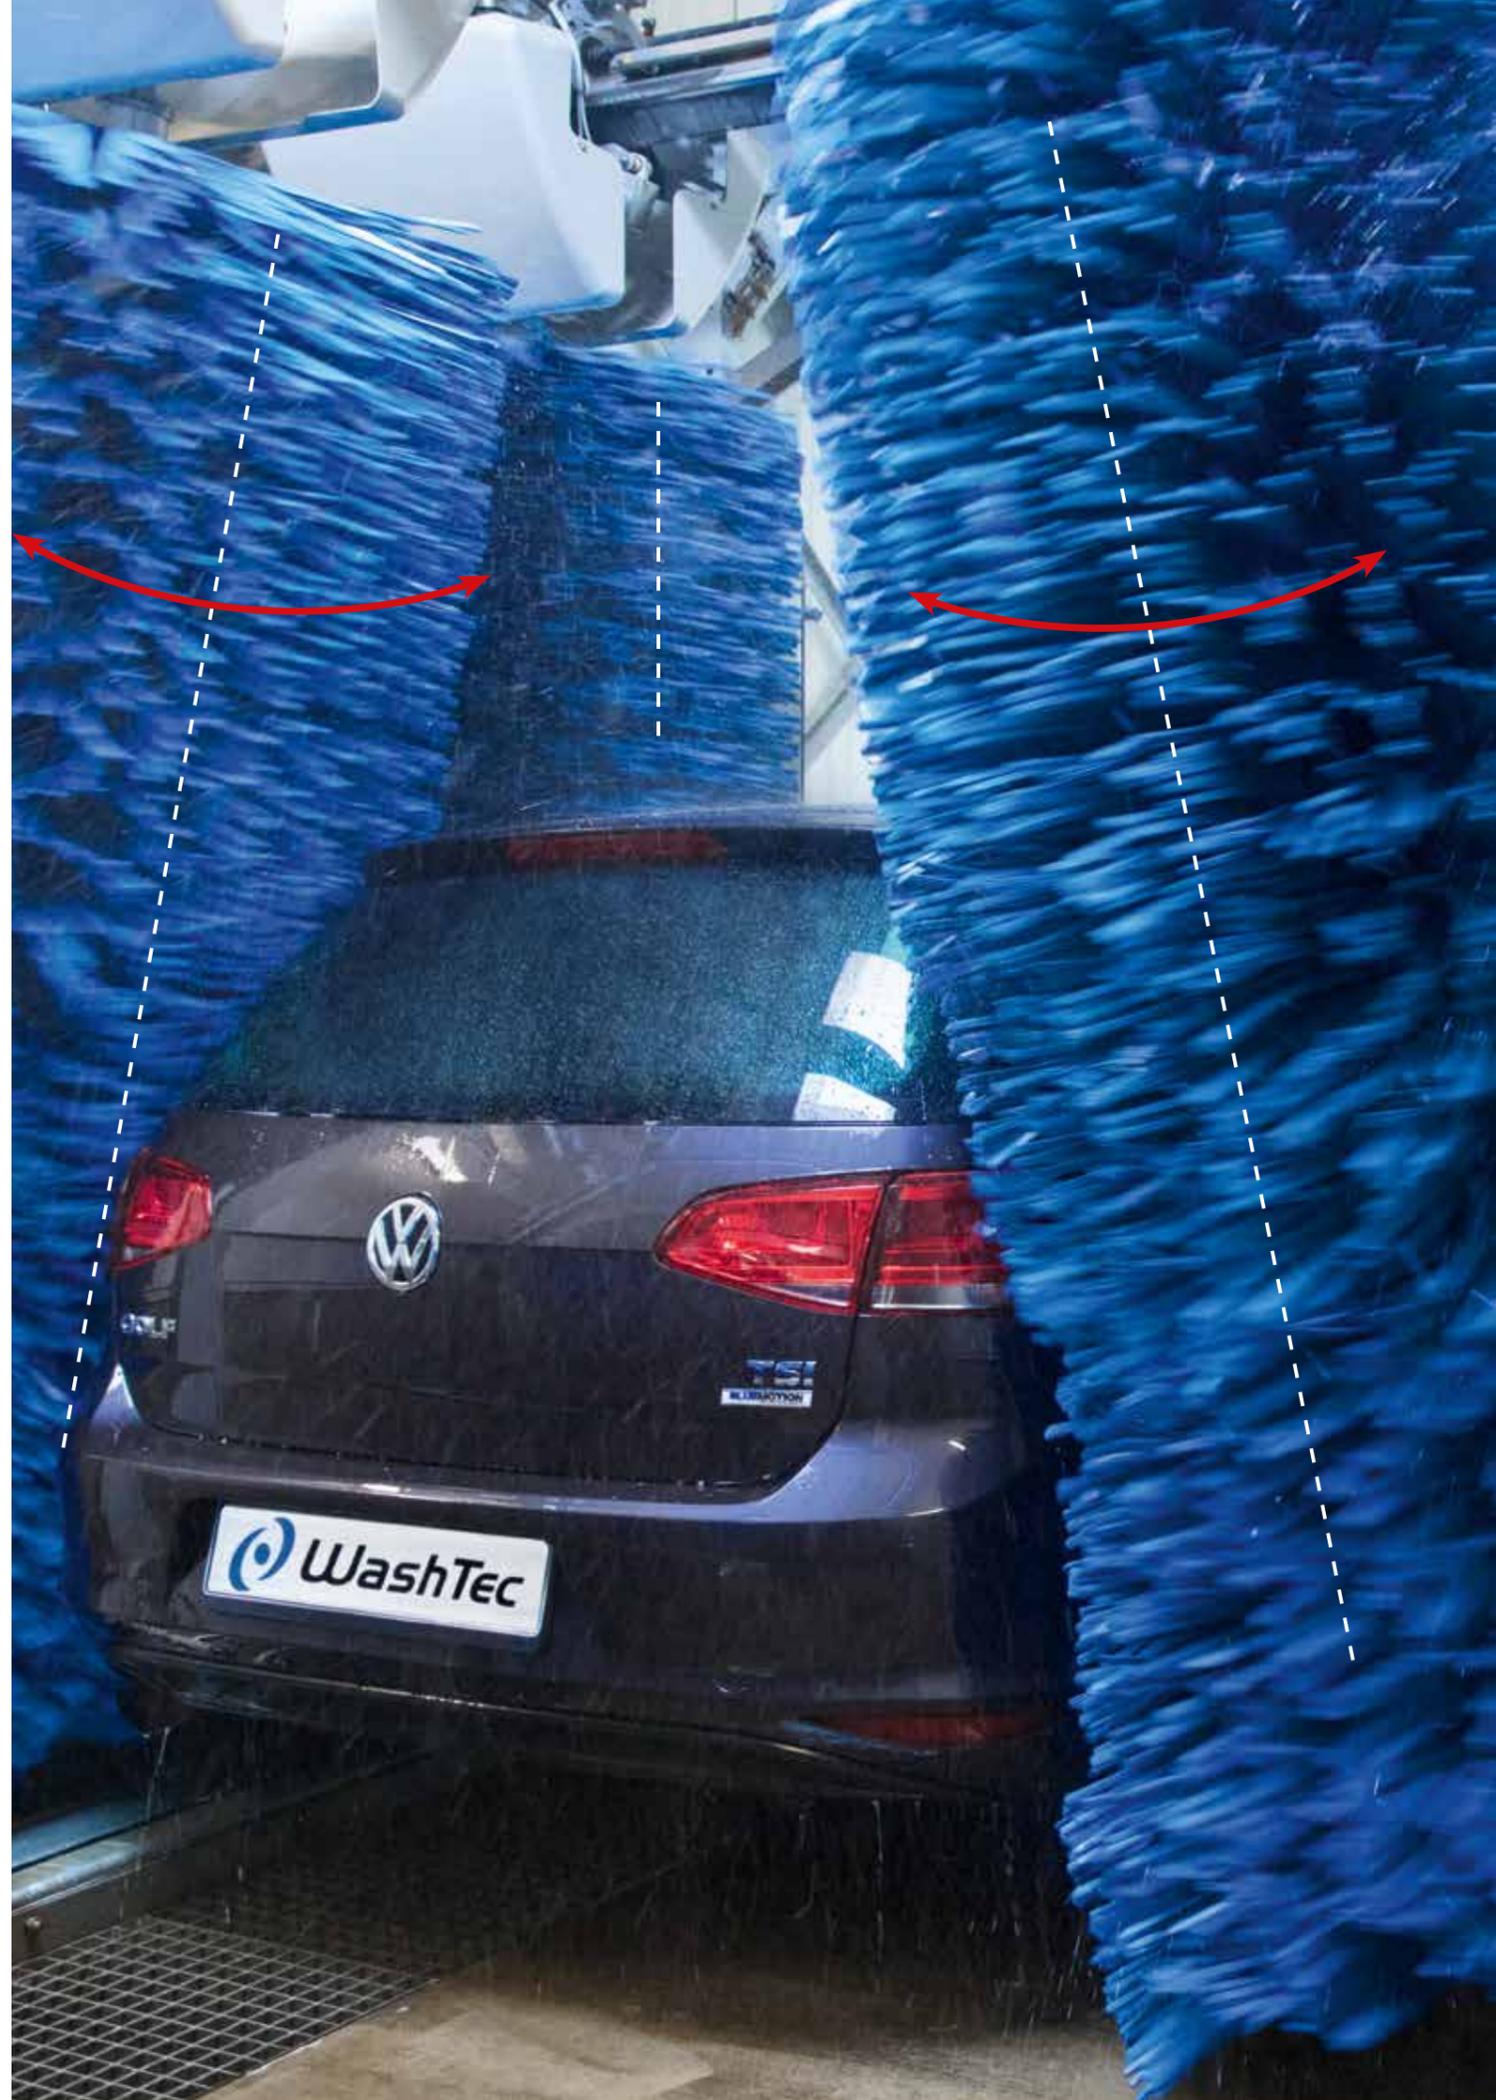

- SofTecs is the right material for a truly gentle way of car washing. It will increase your repeat business and encourage new customers
- SofTecs keeps car paintwork looking shiny and leaves no traces of material abrasion on the vehicles
- The washing material is extremely durable

Textile: Active washing and reliable for every application.

- Textile material is an alternative washing material to SofTecs
- The narrow strips of textile are soft and ensure outstanding washing results
- The textile material is robust and hardwearing
- Its flexibility facilitates the reliable cleaning of all popular vehicle models

Conventional polyethylene materials (PE) are still available

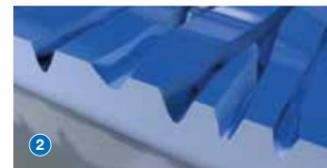

ShineTecs® – one bright idea.

Rubbed in at the polishing station for maximum effect.

ShineTecs®: Paintwork protection with 'repair effect'.

- ShineTecs obscures even the tiniest of scratches in the paintwork
- Each application enhances the clear coating, producing a brilliant shine
- Applied regularly, ShineTecs care makes cleaning the car easier, since water rolls off the surface faster and dirt sticks less

ShineTecs® – how it works:

- 1 In everyday traffic, the paintwork surface picks up tiny microscopically fine indentations, preventing the light from reflecting to its maximum effect. The paintwork dulls.
- 2 When washing with ShineTecs and its unique acryl-ionic formula, these tiny dents get filled in with a gloss layer that lasts for a long time on the paintwork.
- 3 With each wash, the new layer becomes thicker and the car paintwork soon gleams like new again. This is the unique 'shine & repair effect' of ShineTecs. **ShineTecs® – one bright idea.**

ShieldTecs® – the second skin.

Sprayed on before drying for optimal effect.

ShieldTecs® – your paintwork will love it.

Even the best paintwork is not protected against all environmental influences – that is why ShieldTecs has been developed as a wax protective layer over the paintwork surface, helping to maintain your vehicle's value.

ShieldTecs® – how it works:

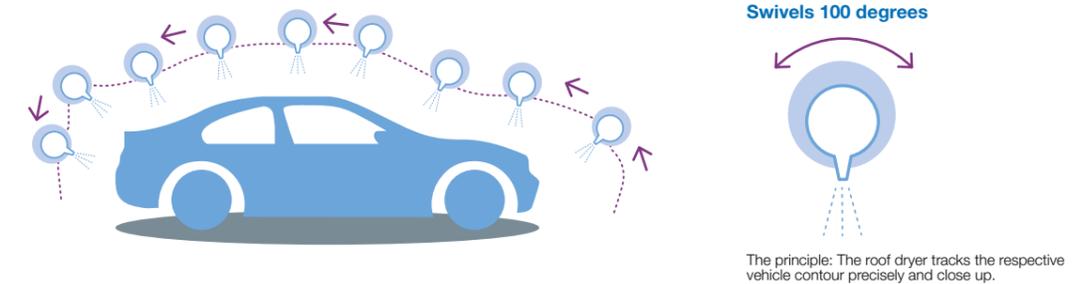

- 1 The unique OMP technology from ShieldTecs contains a high-end polymer and forms a protective layer on the paintwork like a second skin during the car wash.
- 2 It guards your paintwork against aggressive environmental influences such as UV rays, insects and acid rain. Experience the sensational beading effect.

WashTec blower dryer 2+2:

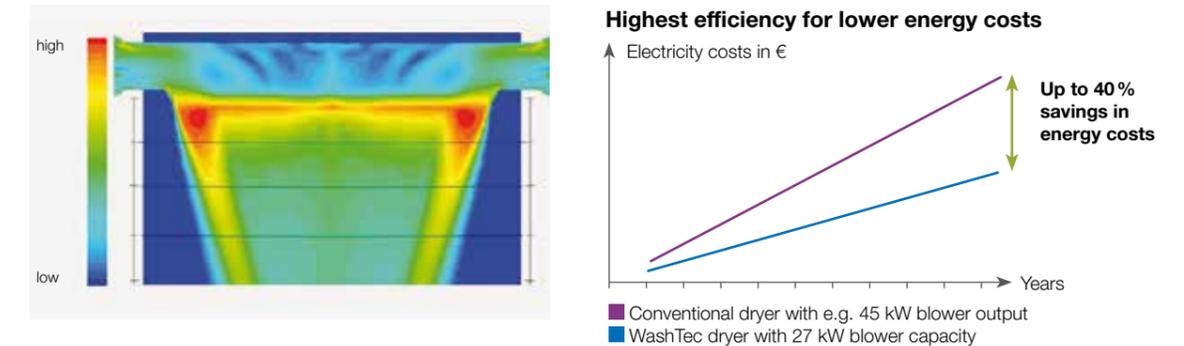

Tracks the vehicle contour –
reduces energy costs.

Blower dryer 2+2: Efficient and energy saving.

Maximum efficiency thanks to swivelling roof dryer.

Integral effect for enhanced side drying by the roof nozzle.

Linear technology: Optimised drying results.

- Flexible combination of roof and side dryer in the 'contour tracking' or 'contour tracking plus linear travel' versions
- The contour tracking of the roof dryers with a fixed or rotary roof nozzle permits drying close up to vehicles – for optimum drying results
- Up to 40% lower energy consumption compared to systems without contour-tracking linear technology
- The dual-belt lift system with belt breakage monitoring on each side ensures extremely reliable operation

Your advantages:

Energy-efficient drying, lower operating costs.

Thanks to the roof blower dryer homing in close to the vehicle contour

Enhanced side drying even on high vehicles.

Integral effect thanks to specially adapted geometry of the roof nozzle

Enhanced drying in the rear area.

By accelerated movement the roof nozzle in the rear area

Textile drying: For the highest demands.

Brush dryer with extra soft material.

- The textile brush dryer is installed downstream from the blower dryer to get vehicles almost perfectly dry
- The brush dryer moves along in unison with the vehicle, prolonging the drying time and further enhancing the drying results
- The roof and side brushes made from soft textile material effectively provide an all-round dry-polish effect to ensure drying results that meet the highest standards
- Choice of two textile materials

Rotating cloth dryer.

- The rotating cloth dryer can be installed as an additional dryer downstream from the blower dryer
- The dryer is available as an angled version with 50 cloth strips or as a straight version with 45 cloth strips
- The cloth strips are suspended from sturdy mounting brackets, making them quick and easy to replace
- The cloth strips that wipe sideways over the vehicle gently remove residual droplets

Swinging cloth dryer.

- The swinging cloth dryer is used as an additional dryer downstream from the blower dryer
- It is used for drying the horizontal surfaces
- The dryer is optionally available with a pod and 64 cloth strips or with two pods running in opposite directions and 128 cloth strips

Your advantages:

Optimum drying results, even for the highest demands.

Thanks to absorbent, soft and paintwork-friendly textile materials

For even happier customers.

Thanks to instantly visible, near-perfect drying

Countdown traffic light: For a safe exit.

Countdown traffic light.

- The LED traffic light presented in an attractive stainless steel housing lights up in different colours
- At the end of the washing sequence, the car wash customers are constantly informed about the time remaining in seconds before they should leave the conveyor belt
- This encourages customers to drive away swiftly and reduces the number of conveyor stops due to the collision protection being deployed

Your advantages:

Few conveyor stops, more throughput.

Due to lower risk of collision and prompt exit

Weatherproof.

Suitable for outdoor installation

Info systems for customers.

Programme column.

- Option of 6 defined faces for displaying the selected wash programme
- To confirm the programme for your customers

Info column: Impress customers with an attractive design.

- High-quality stainless steel info column
- Individually designed front with large banner
- Attractive and eye-catching being fully LED backlit

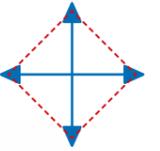

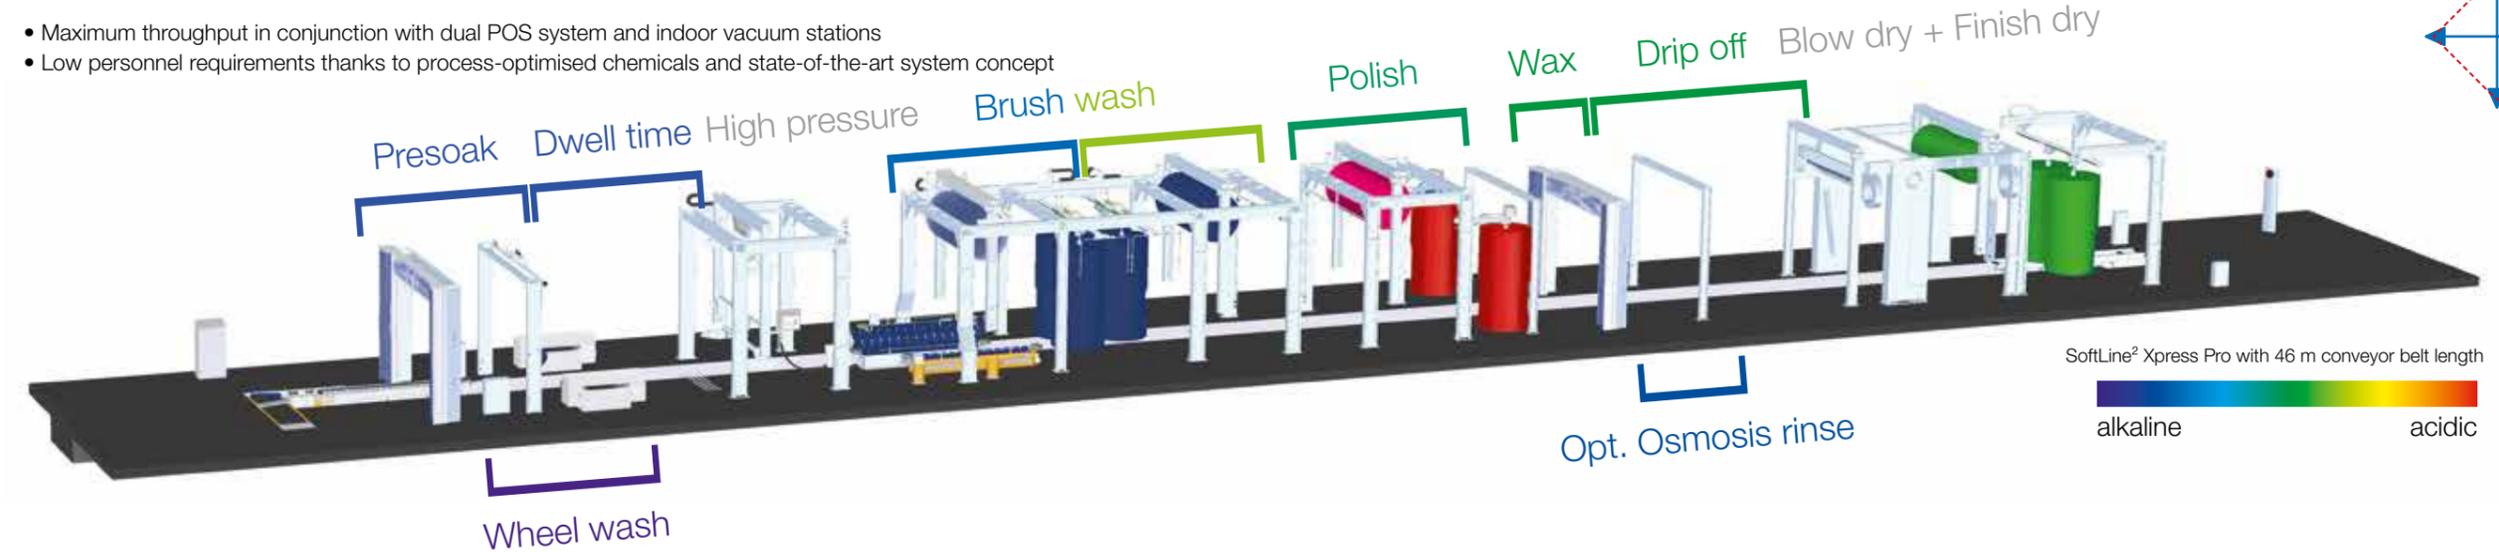

Different car wash types:

SoftLine² Xpress Pro

Express system from 42 m conveyor belt length

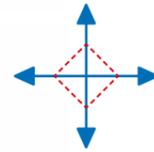

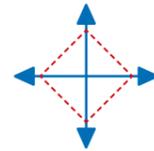

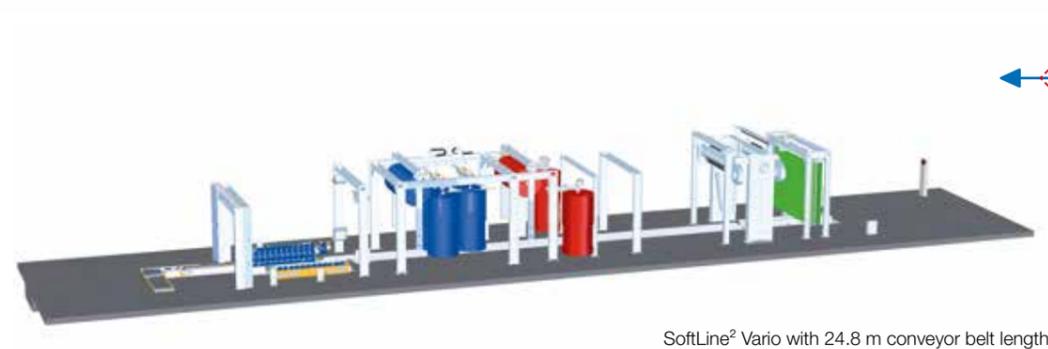

- Maximum throughput in conjunction with dual POS system and indoor vacuum stations
- Low personnel requirements thanks to process-optimised chemicals and state-of-the-art system concept

SoftLine² Vario

Modular system for conveyor belt lengths from 16 m to 40 m

- Optimal adaptation to your site thanks to modular design
- Systems consistently adapted to the conveyor belt speed

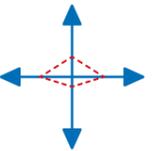

Maximum flexibility for your car wash business.

SoftLine² Compact

Space-saving solution from 11 m conveyor belt length

- Suitable for sites with little space and high washing potential
- Cost-effective investment for entering the car wash business

Your advantages:

Maximum flexibility for optimal adaptation and retrofitting at your site.

Thanks to the modular design of the SoftLine² systems

Quick realisation of the car wash concept in line with your idea.

With preselected configurations of SoftLine² conveyor tunnel systems

One-stop shop: Use WashTec as a system provider.

Water recovery.

Rising freshwater prices and legislation make water recycling essential. Only a technically perfect water recovery system tuned to the car wash guarantees high washing quality and efficiency. For its conveyor tunnel systems, WashTec is committed to using the extremely robust gravel filter, which affords the ideal capacity and accordingly optimum water quality for all the expansion stages. The FR version with a frequency converter also ensures maximum energy efficiency.

Gravel filter system with fully automatic backwashing

Green Car Care wash chemicals – the best in washing performance and eco-friendliness.

Green Car Care is a completely innovative product range – sustainable along the entire value chain from the selection of raw materials to production and product use to waste prevention. 100% performance, 100% sustainability – for 100% customer satisfaction.

In addition, the AUWA product range for conveyor tunnel systems is free from NTA and contains a gloss drying aid with up to 10% faster dispersal of the water film than conventional drying agents. The high concentration and the low consumption combine to offer outstanding value for money.

Self-service stations.

The addition of self-service stations has proven itself in the design of a car wash centre with a conveyor tunnel system. We offer comprehensive solutions from a single source and a broad portfolio of self-service washing technology.

Self-service wash station with colour concept for lanes

Vacuum stations.

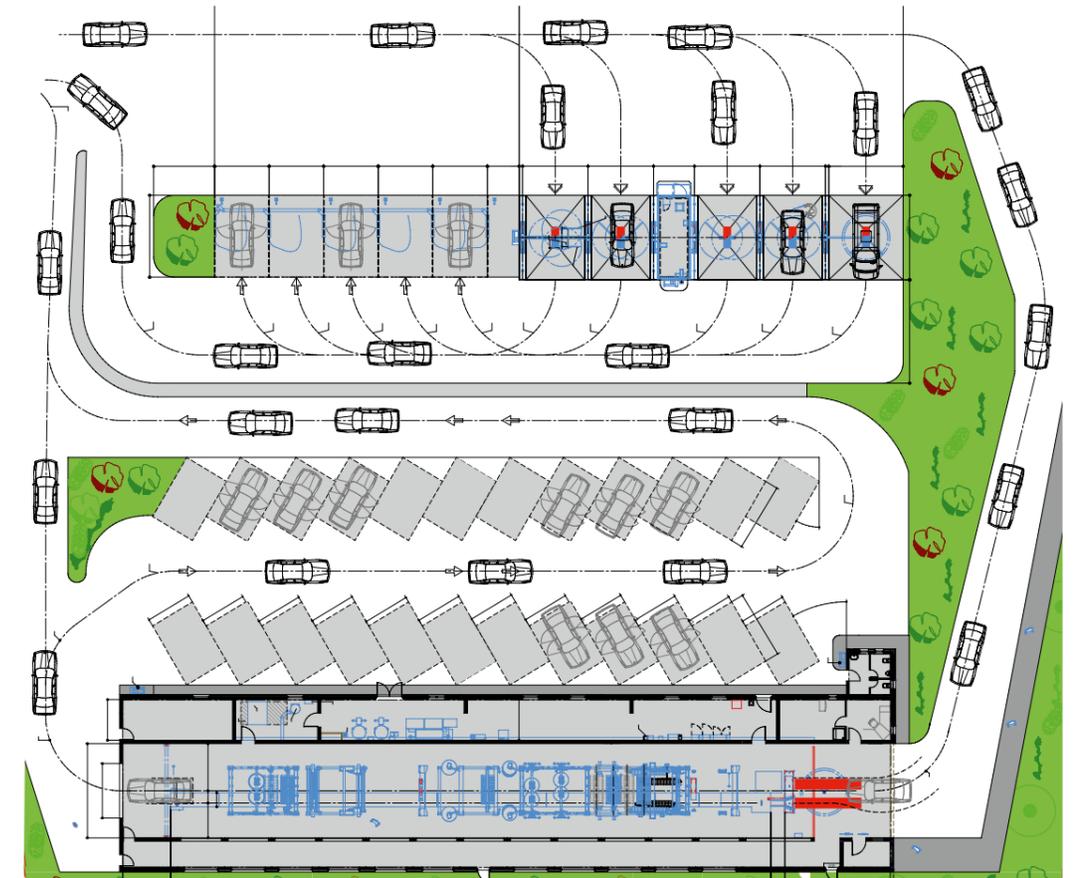

Providing enough vacuum stations in your car wash centre is an important part of the overall concept and increases the washing convenience for your customers. No matter if individual vacuum cleaners, a central vacuum station, indoor or outdoor solution: benefit from our flexibility and experience when installing your vacuum stations.

Vacuum stations connected to a central vacuum station

Planning.

For the successful installation of a conveyor tunnel system it is important to understand how all the trades interact and to keep track of the details. Many factors play a role here: from the best possible floor plan concept to traffic connections through to the correct design and installation of electrical and water connections. With our years of experience in the international arena, we support you in the planning and commissioning of your car wash – for an optimal wash flow and more car washing business at your site.

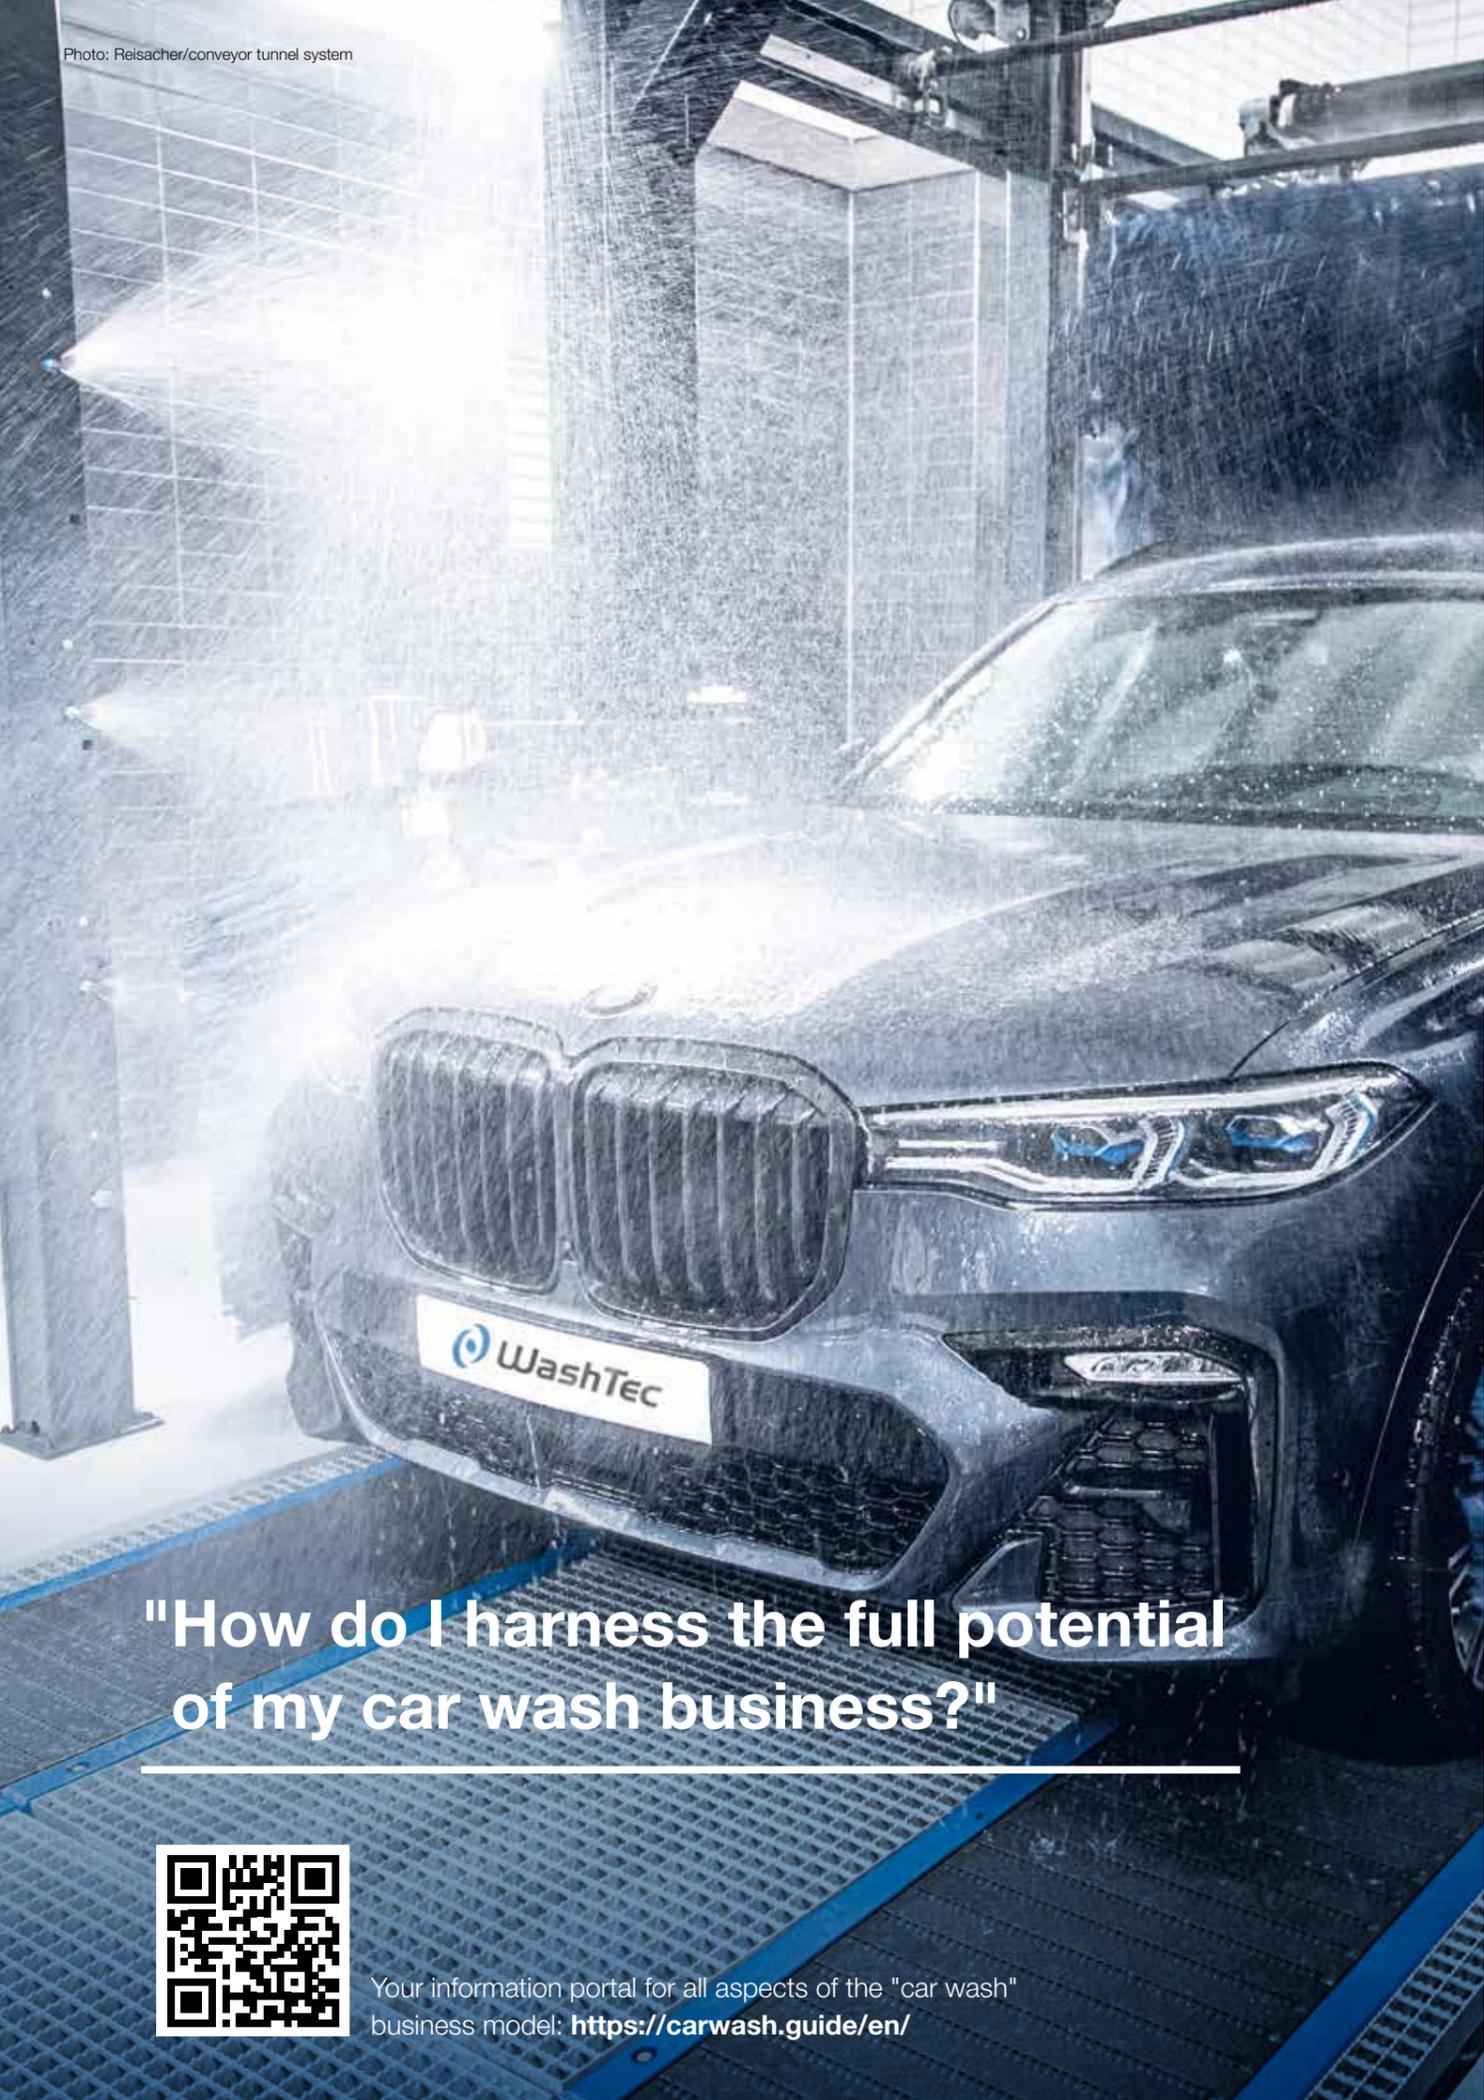

Your advantages:

Maximum utilisation of washing potential at your site.

Through years of experience with the planning and commissioning of car wash centres

One-stop shop.

Interdisciplinary expertise also in the associated peripherals – from water conditioning to vacuum cleaners

With the comprehensive service package from **WashTec**.

Just how successful your car wash business will be, is decided long before it opens. WashTec accompanies you through the entire process – from initial planning through financing to ongoing operation.

As the market leader in the car wash industry, we know what it takes to run a successful car wash business – and we offer a complete one-stop service. Accordingly, SoftLine² Vario not only offers your customers a whole new experience, but you as well.

Expert planning: The basis for your successful business.

Every wash site is different. Just as every car wash customer has their specific needs. We support you in the selection and configuration of the right SoftLine² Vario for you. On request, we also take over the site planning and potential analysis. And thus lay a solid foundation for your successful business.

WashTec Marketing: Ideas for optimal capacity utilisation.

A successful car washing business lives, among other things, from effective marketing. WashTec supports you with useful help and advice: from site and target group analyses to the development of a customised marketing concept through to its implementation and ongoing performance review. We offer you a variety of advertising materials, which enables you to make a positive impression on new and existing customers. The WashTec CarWashShop provides a convenient means of ordering your advertising material.

WashTec Financial Services: One-stop financing solution.

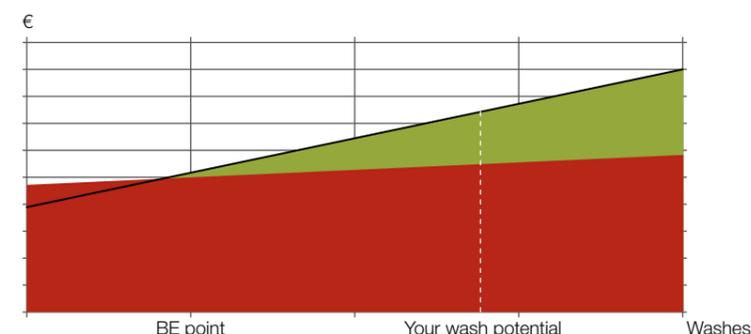

When it comes to financing your car wash, WashTec Financial Services is your first point of contact. Whether lease or hire purchase: We advise you individually, find the best solution for you and offer contract agreements tailored precisely to your specific needs. We also support you in preparing a profitability calculation and offer you attractive terms and conditions.

Maintenance and support: Service as you need it.

Downtime costs time and money. This is why ensuring that your washing facility is operating smoothly is our top priority. Our customised maintenance concepts ensure the constant availability of your car wash. And if things do go wrong, our service network with over 200 experienced employees, state-of-the-art service vehicles and online management systems offers perfect support.

"How do I harness the full potential of my car wash business?"

This is how your profitability calculation might look:

Our references prove: With our proven calculation tool "Renta", we can reliably estimate the washing potential. This is down to our years of experience in the wash business. We also combine the costing with a calculation of the financing. In this way, we give you clarity from the outset on how to set up the car wash business at your site.

Your information portal for all aspects of the "car wash" business model: <https://carwash.guide/en/>

Your digital access to your car wash business. Anywhere and at any time.

Car washing is fast becoming a digital business.

Car washes are controlled remotely via the Internet, operators make purchases conveniently from the online shop and customers want to book and pay for their car wash using their smartphone. The WashTec package of digital, seamless solution concepts enables you to benefit from these developments and control and expand your business – anywhere, anytime.

my.carwash

You benefit from greater convenience and maximum operating time. Control your car wash business from a single, centralised tool, anytime, anywhere.

my.SmartSite

Give your suppliers direct remote access to your car wash. For example, open or close the wash bay door or the technical room. Save energy and costs by adjusting the temperature, lighting and much more. You are always in control. No matter where you are.

my.shop

Our online shop: Order conveniently, secure benefits! In our online shop you will find a wide range of AUWA chemicals, supplementary products, great marketing materials and much more.

Single point of contact focused on reliability and service”

With our combination of digital and analogue service offerings – dedicated help desk and on-call service – you get the support you need, when you need it. This is how we make sure that your car wash business is ready to go at all times.

WashTec offers you a one-stop shop for all your hardware and software needs. Our technicians install the control cabinet, sensors, and set up your car wash via WashLink giving you complete visibility on wash perform, actuators and start up your car wash via WashLink.

At the same time, you can rely on our extensive service network. We have specialists available in every region. From our more than 50 service employees, the right experts are always close at hand.

Your advantages:

- Service hotline for optimum availability (98% of calls are answered directly in person)
- Modern online ticket system for digital, convenient contact options
- Transparent status information by telephone or digital request

Largest manufacturer service network in the industry.

OEM service also means: You can rely on our personal service with a dedicated contact person. We also offer you the most extensive and efficient service network in the industry with over 600 of our own service employees, 50 of whom are based in UK alone.

With our full service offering from repair and maintenance, chemical supply and wash bay cleaning to technical and cosmetic face-lifting, we ensure smooth washing operations and minimised downtimes. And you benefit from tailor-made maintenance contracts and long-term investment security.

Your advantages:

maximum availability
with minimum downtime.

WashTec – a global leader for your success.

WashTec is by far the world's leading provider of innovative solutions for the car wash industry.

Our promise is this: We offer you maximum success with maximum sustainability. Our products, processes and services are designed to achieve this.

Did you know that

... **every day** more than **2 million vehicles are washed** with WashTec systems?

... there are around **40,000 WashTec car washes worldwide**, that impress customers?

... over **1,700** dedicated employees worldwide give their best for you?

... over **600 of our own technicians** in Europe and **300 technicians**

from sales partners are on the road for you?

... we are active with our sales partners in more than **80 countries?**

... we have over **50 years of innovation leadership**, set the standards in the car wash business and actively drive the market forward?

... we offer our **own washing chemicals from AUWA** – perfectly tuned to our systems and to the needs of operators and end customers alike?

WashTec system technology and washing chemicals are VDA-compliant.

Do you have any questions? Are you interested in our products? We are at your service.
